

OIL STABILIZER

PART #4004

BENEFITS:

- Mixes with all conventional and synthetic motor oils.
- Reduces engine friction, increases engine life, improves gas mileage!
- Increases oil pressure.
- Reduces exhaust emissions.
- Leaves a protective oil film throughout the engine.
- Will not separate or settle out.
- Reduces engine oil consumption.
- Stops piston slap.
- Can add to a full crankcase of oil!

INSTRUCTIONS FOR THE OIL STABILIZER

Add one bottle (16 fluid ounces) slowly to a warm idling engine with every oil change or when oil is needed between oil changes.

- **MOTOR PURR OIL STABILIZER** can be added to top of the engine oil or added to a full crankcase. This product coats the internal parts of the engine and does not all go back to the oil pan. That's why the oil level on the oil dip stick only increases slightly. This protective layer protects the engine against friction improving gas mileage while reducing exhaust emissions.
- **MOTOR PURR OIL STABILIZER** is many times thicker than regular motor oil and provides a layer of protection several times greater than standard motor oil. This product mixes with all conventional and synthetic motor oils without settling or separation. This greater oil viscosity helps improve oil pressure, increase engine compression and improve gas mileage.
- **MOTOR PURR OIL STABILIZER** is a premium, 100% petroleum-based, full formulated oil stabilizer that will increase your engine's life and performance by decreasing harmful friction and engine wear, while increasing oil pressure and compression.
- Added to an engine crankcase, **MOTOR PURR OIL STABILIZER** will stop piston slap in 20 minutes!

Juan's Tips: 1. **MOTOR PURR OIL STABILIZER** can be used as an assembly lube when rebuilding an engine. 2. Use **MOTOR PURR OIL STABILIZER** with every oil change to reduce oil consumption.
